## EXPERIENCE

---

### LunarTech — Software Engineering Apprentice

June 2026 – August 2026

- Executed functional testing on Octavia, identified and reproduced a billing defect where credits failed to update after plan changes, and documented findings for engineering follow-up
- Evaluated application behavior and technical architecture to identify reliability risks and recommend improvements
- Documented testing findings, system behavior, and production-readiness considerations to support engineering decisions

### Scale AI — Software Engineer, AI Consultant

Mar 2024 – May 2025

- Reviewed and validated ~10 AI-assisted coding tasks weekly in Python and Java, identifying functional and data-processing defects
- Debugged failing implementations, identified root causes, and corrected model-generated code to improve reliability
- Designed targeted prompts and test scenarios to expose edge cases and document recurring model failures

## TECHNICAL SKILLS

---

**Languages:** JavaScript, TypeScript, Python, Java, C/C++, SQL, HTML/CSS

**Testing & Tools:** Playwright, Selenium, Git, GitHub, Trello

**Frameworks:** Node.js, Express.js, React, Flask, TensorFlow

**Databases:** PostgreSQL, MySQL, MongoDB, Couchbase, Neo4j, Cassandra

**AI Tools:** Claude, Codex, GitHub Copilot

## PROJECTS

---

### ICS Search Engine

Nov 2023 – Dec 2023

- Built and tested a search engine indexing 50,000+ UCI web pages, handling malformed HTML, duplicate content, and edge cases during indexing
- Implemented inverted indexes, TF-IDF scoring, and tiered indexing for relevance ranking
- Returned complex query results in under 300ms and built a Flask web GUI to display results

### StockPredictor

June 2025 – Aug 2025

- Built a full-stack application predicting stock prices using LSTM models trained on historical market data
- Built a NestJS backend with REST APIs for predictions, user input, and real-time data retrieval
- Integrated the Finnhub API to surface relevant financial news alongside predictions

### MyCineList | [Live Site](#)

Sep 2023 – Oct 2023

- Built a full-stack application for rating movies and managing personal watchlists
- Implemented Google OAuth authentication, MongoDB persistence, and MovieDB API integration

## EDUCATION

---

### University of California, Irvine — Bachelor of Science, Computer Science

Sep 2022 – Dec 2024

- GPA: 3.846
- Relevant coursework: Software Testing & QA, Software Engineering, Data Structures & Algorithms, Data Management, Information Retrieval, Machine Learning/Data Mining
