EXPERIENCE

LunarTech - Software Engineering Apprentice

June 2026 - August 2026

- Identified a plan-upgrade credit defect through manual workflow testing; documented evidence that enabled engineering to resolve it before release
- Evaluated AI models on token costs, task-specific quality, GPU requirements, and benchmarks; delivered a technical tradeoff report to the COO
- Researched and authored educational articles on [system design](#), [database performance](#), and [production readiness](#), published on LunarTech's website

Scale AI - Software Engineer, AI Consultant

Mar 2024 - May 2025

- Evaluated ~10 AI-generated Python and Java solutions weekly against requirements and tests; corrected logic and outputs before secondary review and data submission
- Designed targeted test prompts to expose code errors, hallucinations, and instruction-following failures; documented weaknesses for model evaluation

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, HTML/CSS

Frameworks/Libraries: React, Node.js, Express.js, NestJS, Flask, TensorFlow

Databases: MongoDB, PostgreSQL, MySQL

Tools: Git, GitHub, Claude, Codex, GitHub Copilot

PROJECTS

ICS Search Engine

Nov 2023 - Dec 2023

- Contributed to a search engine indexing 50,000+ UCI webpages using inverted indexes and TF-IDF scoring
- Designed priority-based tiered indexes, enabling complex queries across 50,000+ pages in under 300ms
- Implemented SimHash near-duplicate detection to bypass redundant indexing of nearly identical pages
- Built a Flask web interface for submitting queries and displaying ranked results

StockPredictor

June 2025 - Aug 2025

- Developed a TensorFlow LSTM pipeline using historical daily closing prices for short- and multi-day stock predictions; evaluated 5-day and 1-month forecasts using MSE
- Designed a NestJS REST API connecting React to Python/TensorFlow, enabling configurable prediction horizons while separating API logic from model inference
- Integrated Finnhub to display ticker-specific financial news alongside forecasts, adding market context

MyCineList | [Live Site](#)

Sep 2023 - Oct 2023

- Built and deployed a full-stack movie tracking app for searching, rating, sorting, and managing movie lists
- Integrated Google OAuth and MongoDB to persist personalized movie lists and ratings across sessions
- Enabled rating updates without page reloads using AJAX and collection sharing through public URLs

EDUCATION

University of California, Irvine

Sep 2022 - Dec 2024

Bachelor of Science in Computer Science | GPA: 3.846

Relevant coursework: Data Structures & Algorithms, Software Engineering, Data Management, Software Testing & QA, Information Retrieval, Machine Learning/Data Mining
